JAEWOO CHOI

GAME PROGRAMMER

010-2776-2295 wod6983@gmail.com https://jaw-choi.github.io/ https://github.com/jaw-choi
Gwangjin-gu, Seoul

SKILLS

LANGUAGE: C, C++, C#, GLSL

TOOLS: Unity, Unreal, OpenGL

EDUCATION

DigiPen Institute of Technology
Bachelor of Science in Computer Science in Real-Time Interactive Simulation
2022.07 - 2024.04
GPA 3.7 / 4.0

Keimyung University (Bachelor's) - Daegu
DigiPen Game Engineering (Dual Degree)
2018.03 - 2024.08
GPA 4.0 / 4.5

CERTIFICATIONS

Engineer Information Processing
Obtained: 2025.06.13

ADsP (Associate Data Analyst)
Obtained: 2025.06.13

OPIc (English) - AL
Obtained: 2026.09.23

PROJECTS

Client Programmer / 5-Person Team 2026.06 - 2026.07

TFT-Style Auto Battler

- Designed a combat state machine and attack hit-detection pipeline on the Gameplay Ability System, and implemented 20+ champion skills.
- Traced a multiplayer bug where basic-attack damage was applied twice due to montage replication, and fixed it with HasAuthority-based server authority checks to keep combat resolution stable.
- Managed Excel-based champion stats through DataTables, designing an extensible data structure that adapts quickly to stat changes from game design.

Game Programmer - Solo Project 2026.02.05 - 2026.02.11

Console Vampire Survivors-like

- Used a QuadTree to limit collision checks to nearby objects, optimizing per-frame processing performance.
- Introduced object pooling to prevent memory fragmentation from frequent runtime object creation and destruction, keeping memory usage stable.
- Built a habit of documenting the entire development process, enabling fast context recovery during project retrospectives.

Game Programmer / 2-Person Team, Released on Google Play 2025.12 - 2026.03

Roll the Snowball!

- Adopted a Figma plugin to speed up UI implementation and standardized naming conventions to minimize collaboration overhead.
- Ran a release checklist to reduce deployment mistakes, and established version naming and code conventions to improve patch response and maintainability.
- Turned recurring Unity component code patterns into prompt templates and built a process to generate them with an AI code assistant, speeding up UI and prototype development.

EMPLOYMENT

A ROUND ENTERTAINMENT, Software Engineer, Jersey City, NJ 07310, US 2024.01 - 2024.04

Tech Stack: React Native, JavaScript, Expo, Android Studio, CSS, Firebase, Figma, Slack

- Joined the Joopy dating app project as an intern and worked with the UI/UX team to develop the profile editing screen.
- Fixed an async issue where image order was not reflected in real time, using async/await, Promises, and Firebase integration.
